

● ILLUSTRATIVE SAMPLE

AI-Visibility Audit

A clear view of how easily AI assistants can understand, trust,
and recommend a local business.

PREPARED FOR

Harbor & Pine

Fictional local business · Demonstration data only

DOCUMENT

NS-SAMPLE-01

EDITION

July 2026

CLASSIFICATION

Public sample

01 • AT A GLANCE

Promising foundation. Uneven recommendation visibility.

Harbor & Pine is recognizable, but its relevance and credibility do not travel consistently across AI recommendation environments.

OVERALL DIAGNOSIS

Understandable, but not yet consistently recommendable.

The opportunity is to reduce ambiguity—not chase a single ranking.

DIRECTIONAL ASSESSMENT

Uneven

Illustrative qualitative finding. Not a ranking guarantee or industry standard.

● RECOGNIZED

The business can be identified.

Name, location, and broad service category are generally clear.

● INCONSISTENT

Recommendation presence varies.

The business enters some consideration sets but disappears from others.

● MIXED

Trust is not uniformly interpreted.

Credibility exists, yet the available evidence does not read as one coherent story.

● ACTIONABLE

The gaps can be prioritized.

A focused clarity-and-proof program should precede broader visibility work.

EXECUTIVE TAKEAWAY

The business does not have a simple awareness problem. It has a consistency problem between what it offers, how that value is evidenced, and how confidently an assistant can pass the recommendation to a customer.

02 • WHAT SURFACED

Recognition is ahead of recommendation.

The business is visible enough to be understood, but not consistently strong enough to earn a confident place in a local shortlist.

VISIBILITY PATTERN Varied Recommendation presence changed across relevant contexts.	BUSINESS RECOGNIZED Present Name and category were generally understood.	ENTERED SHORTLIST Uneven Recommendation presence was inconsistent.	CLEAR RATIONALE Limited Strong recommendation confidence was uncommon.
---	--	--	--

Diagnostic summary. All observations below are fabricated for this public sample.

DIMENSION	CURRENT STATE	BUSINESS INTERPRETATION
Brand recognition	● Strong	The business is usually recognized as a real local option with a coherent identity.
Service relevance	● Partial	Broad relevance is understood, while higher-intent service distinctions remain unclear.
Local relevance	● Uneven	The connection between the business, its market, and the customer need is not equally strong everywhere.
Trust evidence	● Mixed	Credibility is present, but the supporting story can appear fragmented or incomplete.
Recommendation confidence	● Low	Assistants do not yet have a consistently clear reason to move the business into the final shortlist.

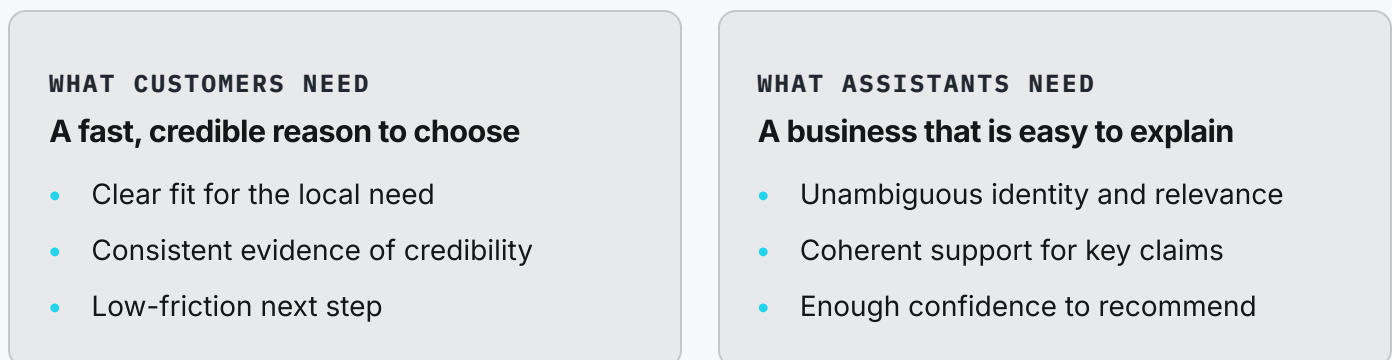

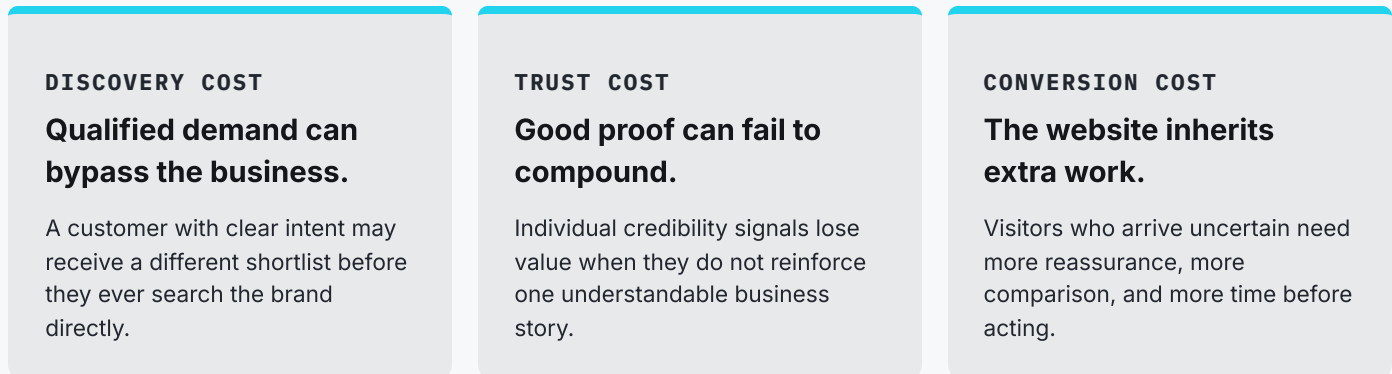

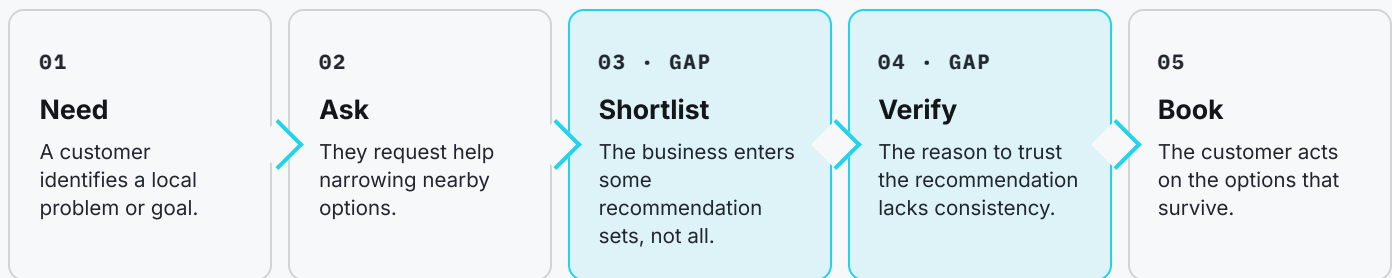

FINDING IN PLAIN LANGUAGE

Harbor & Pine is not invisible. It is **under-explained at the moment a recommendation requires confidence.**

03 • WHY IT MATTERS

The visibility gap appears before the click.

Customers increasingly ask an assistant to narrow the field. If the business is missing, misread, or weakly explained at that stage, the website may never get the chance to convert them.

The practical goal: make the business easier to understand, easier to trust, and easier to include in a recommendation—without depending on a single platform or momentary result.

04 • WHAT TO IMPROVE

Outcomes, in priority order.

The roadmap begins with clarity and evidence, then moves toward broader consistency. It is intentionally outcome-led; implementation detail is scoped privately.

01	IMMEDIATE Clarify the business identity	Align the customer-facing story around what Harbor & Pine is, who it helps, and where it is relevant.	Target outcome Less ambiguity at first interpretation.
02	IMMEDIATE Strengthen proof coherence	Ensure credibility signals support the same core claims instead of appearing as disconnected fragments.	Target outcome A clearer reason to trust the recommendation.
03	NEXT Reinforce local service relevance	Make the relationship between services, customer needs, and the local market easier to understand.	Target outcome Stronger fit in high-intent local decisions.
04	NEXT Reduce conversion uncertainty	Carry the same promise and trust story through the moment a customer verifies and takes action.	Target outcome A smoother path from shortlist to inquiry.

DO FIRST
Resolve clarity before expanding reach.

More exposure will not correct an inconsistent story. Establish a dependable foundation first.

AVOID
Chasing one assistant's latest answer.

Build durable understanding and credibility instead of reacting to a single volatile result.

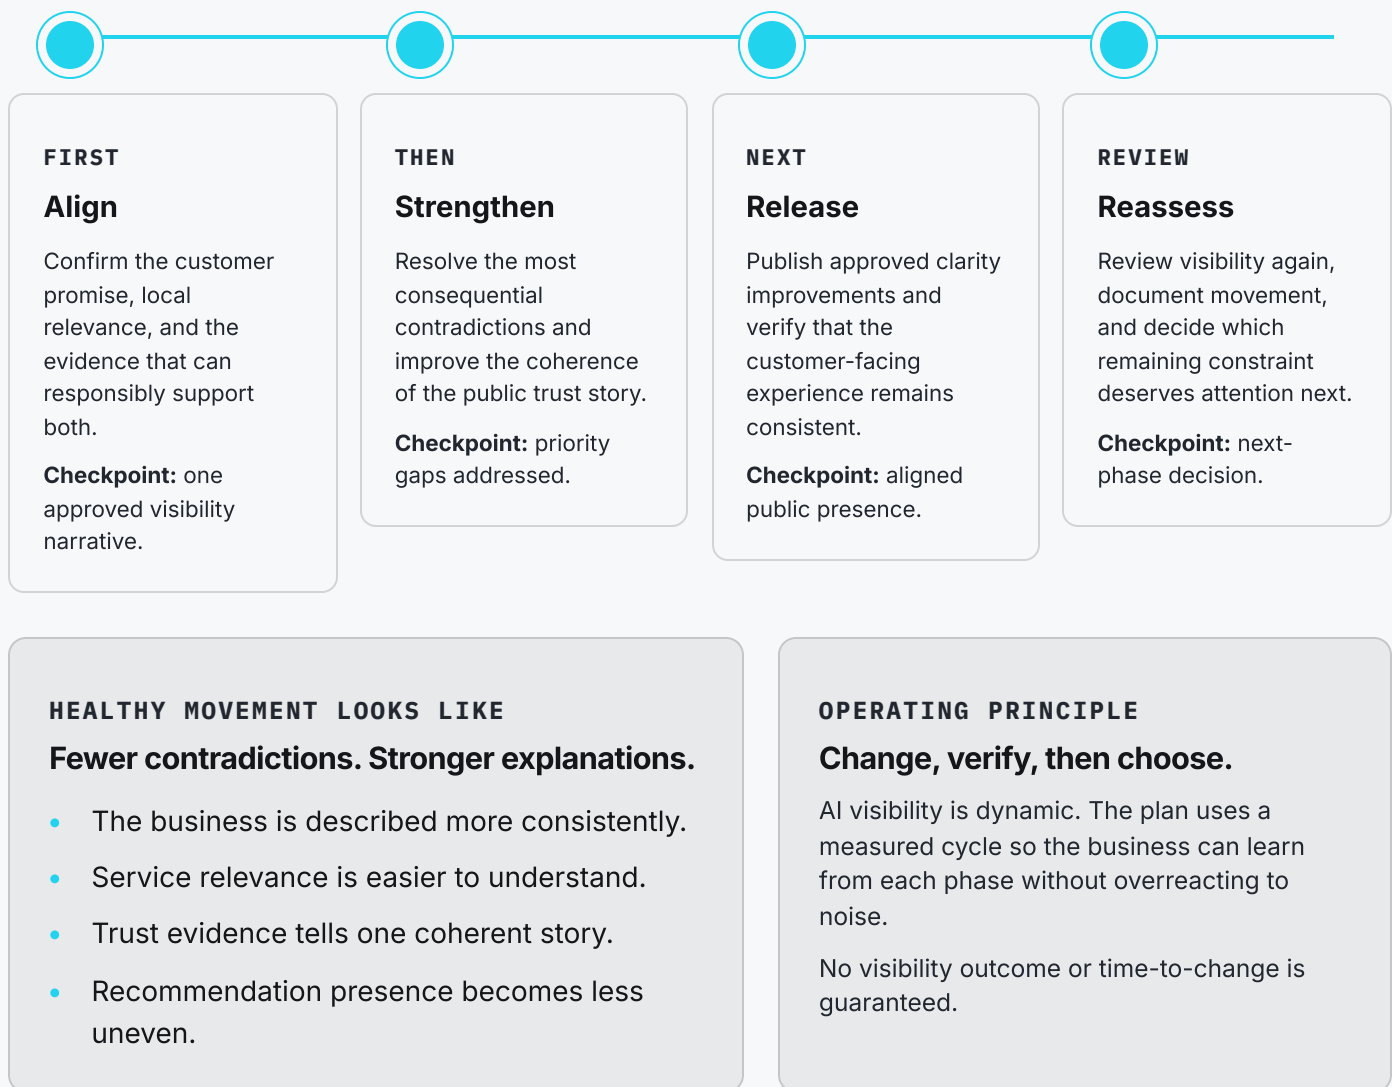

SCOPE NOTE

This public sample shows **what to improve and why**. A private client engagement turns approved priorities into a tailored implementation brief and next-step plan.

05 • HOW TO SEQUENCE IT

A focused sequence, not a sprawling rebuild.

The roadmap starts with the highest-value clarity gaps, strengthens the proof story, and establishes a clean baseline for reassessment. Timing is scoped to the client's constraints.

Decision gate after reassessment: continue only where the evidence shows a meaningful remaining constraint or a credible opportunity to improve customer confidence.

06 • READ THIS CORRECTLY

A diagnostic snapshot—not a promise of placement.

AI recommendations change with context, available evidence, platform updates, and time. The audit is designed to support better decisions under that uncertainty.

Limitations & disclaimer

- This document uses a fictional business and fabricated figures solely to demonstrate the deliverable format.
- A live audit is a point-in-time assessment. Results may vary between platforms, contexts, and later checks.
- Directional indicators summarize observations; they are not an industry standard or a guarantee of future performance.
- No audit can guarantee inclusion, placement, traffic, leads, revenue, or a specific time-to-change.
- Recommendations should be reviewed against operational, legal, and customer-experience constraints before implementation.

What a private audit includes

- Executive visibility diagnosis
- Aggregate findings with business context
- Priority roadmap and decision sequence
- Private supporting evidence
- Optional implementation scoping

Sensitive diagnostic details remain in the private client record and are not reproduced in the public sample.

YOUR BUSINESS WILL HAVE A DIFFERENT STORY

See where your AI visibility actually stands.

Get a private, plain-English assessment of where your business appears, where confidence breaks down, and what deserves attention first.
